

Oval Wheel Flowmeter for low and high viscous liquids

measuring
•
monitoring
•
analysing

DON

- Measuring range:
0.5 ... 36 l/h und 150 ... 2500 l/min
- Viscosity range: up to 1000 cP
(higher on request)
- Accuracy: $\pm 0.2\%$... 1% of reading
- Material: aluminium or stainless steel
- p_{\max} : 100 bar; t_{\max} : 150 °C
- Pulse output, LCD display, 4...20 mA,
alarms, mechanical register

S4

Principle of Operation

Oval gear flowmeters are categorised as positive displacement flow technology. When liquid flows through this type of positive displacement flowmeter, two oval geared rotors measure a constant volume per rotation within a precisely machined measuring chamber. With each rotation, a constant volume of liquid is measured. The rotation of the oval gears is sensed via magnets embedded within the rotors. These magnets transmit a high resolution pulse output. The output signal can be process externally via a remote display controller or PLC or via a variety of output/display options available as accessories attached to the flowmeters.

Operation:

Liquid travels around the crescent shaped chambers created by the rotational movement of the rotors

The positive displacement flow technology allows for precise flow measurement of most clean liquids regardless of the media conductivity. Other liquid properties also have a minimal effect on the performance of this type of meter. Flow profile conditioning is not required as with alternative flow technology options making oval gear installations simple to install in tight spaces and at an economical price.

Areas of Application

For all viscous, non abrasive clean liquids like:

- Petroleum
- Oil
- Chemicals
- Grease
- Fuels
- Ink etc.
- Pastes

Stainless steel flowmeters are suited to most products and chemicals and aluminium meters are suitable for fuels, fuel oils & lubricating liquids.

Technical Details

Material

DON-1	
Body:	aluminium
Oval wheels:	PPS GF30/PTFE
Axes:	stainless steel 1.4404
DON-2	
Body:	stainless steel 1.4404 DON-x05 ... DON-x15 (body cover DON-205 st. steel 1.4429) stainless steel 1.4404/1.3955 DON-x20 ... DON-x60
Oval wheels:	stainless steel 1.4404 DON-x05 ... DON-x40 stainless steel 1.3955 DON-x45 ... DON-x60
Bearing:	carbon graphite
Axes:	stainless steel 1.4404
DON-8	
Body:	stainless steel 1.4404 DON-x05 ... DON-x15 (body cover DON-805 st. steel 1.4429) stainl. steel 1.4404/1.3955 DON-x20 ... DON-x60
Oval wheels:	PPS GF30/PTFE
Axes:	stainless steel 1.4404
O-rings:	medium temperature FKM: -20 ... +150 °C NBR: -20 ... +100 °C FEP-O-seal: -15 ... +130 °C (FEP-O-seal, FEP encased, with solid core EPDM)
Cover for cable connection:	polyamide PA6 GF35 UL94 HB/VO stainless steel 1.4404 (optional)

Material screws

For aluminium housing: stainless steel (standard) steel, coated with GEOMET® 321 (DON-A25)

For stainless steel housing: stainless steel (standard) steel, coated with GEOMET® 321 (optional) for higher pressure rating (see order details)

Accuracy (under reference conditions*): ± 1 % of reading (DON-x05...DON-x15)

SS-rotors: ± 0.5 % of reading (DON-x20...DON-x60) ± 0.2 % of reading (DON-x20...DON-x60; with optional Z3/E3-electronics based on linearisation function)

PPS-rotors: ± 1 % of reading (DON-x20...DON-x60) ± 0.5 % of reading (DON-x20...DON-x60; with optional Z3/E3-electronics based on linearisation function) ± 1 % of reading (option M) (better accuracy for higher viscosities on request)

Additional max. inaccuracy for analogue outputs 4-20 mA: +/-0.15% full scale

Repeatability: typ. ± 0.03%

Protection class: IP 66/67 (IP 65 for M4)

Medium temp.: -20°C... +80°C for options Lx, Zx, M4, DON-1/DON-8 and -20°C... +120°C for DON-2 with pulse output and options Zx with cooling fins (+150°C with option T0) for models with PPS-rotors, max. temp. is limited to +80°C

Ambient temp.: -20°C... +80°C, option M4 0°C... +60°C

Cable entry: M20x1.5, 1/2" NPT adapter

ATEX-approval (option E1/E2/E3/E4/E5): II 2G Ex ia IIC T4 Gb (-20°C ≤ Ta ≤ +60°C)

(option HE, DE, BE, KE, GE, LE, RE): II 2G Ex db IIC T4/T6 Gb I M2 Ex db I Mb

IECEX-approval (option E1/E2/E3/E4/E5): Ex ia IIC T4 Gb

(option HE, DE, BE, KE, GE, LE, RE): Ex db IIC, Ex db I Mb

* Reference conditions: x05...x20 (mineral oil 10 cSt, 20°C, 5 bar); x25...x60 (mineral oil 3 cSt, 20°C, 1 bar). Accuracy data is valid for given viscosities and higher.

Maximum Pressure (threaded version)

Model	Maximum pressure (bar)			
	DON-1	DON-2/8	DON-1.. (Option-M4)	DON-2/8 (Option-M4)
DON-x05	64	100	-	-
DON-x06			-	-
DON-x10			-	-
DON-x15		100	-	-
DON-x20	40	70*	40	40
DON-x25		60*		
DON-x30		40	50	
DON-x35				
DON-x40	16	16	16	16
DON-x45				
DON-x50				
DON-x55				
DON-x60				

with flanges, maximum pressure rating as above or as per flange rating, whichever is lower

* Max. pressure rating of 100 bar possible with steel screws (see order details)

Recommended Filter (for example model MFR-DO...)

DON-x05 ... DON-x15 < 75 µm micron (200 mesh)
 DON-x20 ... DON-x35 < 150 µm micron (100 mesh)
 DON-x40 ... DON-x60 < 350 µm micron (45 mesh)

Pulse Output

Reed switch pulse output (... R0/RE)

The reed switch output is a two wire normally open SPST voltage free contact ideal for installations without power or for use in hazardous area locations when Intrinsically Safe (I.S.) philosophy is adopted.

Note: when using the reed switch output the liquid temperature must not change at a rate greater than 10°C per minute.

Average switching life of reed contact (MTTF):

max. Load (100 V/10 mA) 5x10⁵ switching cycles
 min. Load (<5 V/10 mA) 5x10⁸ switching cycles

Power supply: max. 30 V_{DC}, max. 200 mA

Hall sensor pulse output (... H0/HE)

In the electronics options H0/HE, a Hall Effect sensor is combined with an active push-pull output. The electrical connection is provided in 3-wire version. The output is actively switched either to +Vs or to ground. The external supply voltage is 8...30 V_{DC}. No additional external circuit is required (e.g pull up resistor). The high signal is approximately equal to the supply voltage +Vs and the low signal is approximately 0 V. The electrical load may optionally be connected to the supply voltage or to GND.

Maximum output current (current source or sink): 100 mA (short circuit protected).

In addition to Hall sensor, this option is equipped with a Reed switch which works the same as Option R0/RE.

Hall sensor pulse output (...HU)

Like option H0, however with following deviations:

- (i) no push-pull output - only NPN output
- (ii) supply voltage 5 - 30 V_{DC}

Hall sensor pulse output (...B0/BE)

Like options H0/HE, however with bipolar sensors and alternating polarised magnets. This option is used for pulsating flows, but it is not equipped with Reed switch and has halved K-factor as compared to H0/HE.

High-resolution Hall sensor pulse output, (...G0/GE, ...K0/KE)

Like options H0/HE; model DON-x05...DON-x10 can be supplied with four times the count of pulses per liter (...G0/GE) and models DON-x05...x20 with double amount of pulses (K0/KE) (see table «Output Pulse Resolution» on the following pages).

Quadrature hall effect pulse output (...D0/DE)

DON instrument with option D0/DE is provided with two independent Hall sensors. The two hall effect sensors are arranged to give separate outputs out of phase with one another.

The QUAD output is mostly suitable for custody transfer with redundant signal or for detecting bidirectional flows (detection of flow direction).

Maximum output current per channel (current source or sink): 100 mA (short circuit protected).

Option L0/LE

The options L0 and LE (Ex) are available with loop powered 4-20 mA output. The loop is supplied with an external power supply 16...32 V_{DC}. The maximum resistance of the series loads (PLC analogue input/display electronics) depends on the magnitude of the supply voltage and can be calculated as:

$$\text{Max. load [Ohm]} = (+V_s - 9 V_{DC}) / 0.02 \text{ A } [\Omega]$$

$$\text{Example: } +V_s = 32 V_{DC} = > \text{max. load} = 1150 \Omega$$

$$+V_s = 16 V_{DC} = > \text{max. load} = 350 \Omega$$

The load can be inserted at any point in the current loop observing correct polarity.

Mechanical totaliser (...M4)

The flowmeters type DON-x20... up to DON-x60... are available with a 4-digit resettable mechanical totaliser and indication of accumulated total value. The motion of the rotors is transmitted to the mechanical register totaliser via an interfacing reduction gear train and dynamic seal assembly.

Option M4 is available for volume units litre and gallon.

Body material: enamelled die-cast aluminium, powder-coated

Protection: IP65

Ambient temp.: 0...+60°C

Medium temp.: -20...+80°C

DON Pressure Drop Curves versus Viscosity

- ① Standard rotors 100 % of full scale
- ② Standard rotors 50 % of full scale
special cut rotors 100 % of full scale
- ③ Standard rotors 25 % of full scale
special cut rotors 50 % of full scale
- ④ Special rotors 25 % of full scale
- ⑤ Special rotors 10 % of full scale

- ② Standard rotors 50 % of full scale
special cut rotors 100 % of full scale
- ③ Standard rotors 25 % of full scale
special cut rotors 50 % of full scale
- ④ Special cut rotors 25 % of full scale
- ⑤ Special cut rotors 10 % of full scale
- ⑥ Special cut rotors 5 % of full scale

Pressure drop limit versus flowrate

The curves above represent the pressure drop for standard cut oval rotors. Special cut rotors option «Y» have alternate tooth relieve which effectively reduces the pressure drop by

50%. When sizing a meter, be sure your selection falls **below the 1 bar maximum allowable pressure drop line on the graph.**

Maximum Flowrate Multiplier (for higher viscosities)

Viscosities (cP)	Standard rotor	Special cut rotor
≤ 1000	1	1
≤ 2000	0.5	1
≤ 4000	0.42	0.84
≤ 6000	0.33	0.66
≤ 8000	0.25	0.5
≤ 30000	0.15	0.3
≤ 60000	0.12	0.25
≤ 150000	0.1	0.2
≤ 250000	0.05	0.1
≤ 1000000	0.025	0.05

Special cut rotors for higher viscosities

For viscosity > 1000 cP, special cut rotors option «Y» should be used to reduce pressure drop. This applies to DON-x15 and larger sizes. For higher viscosities, the flowmeter max. flowrate is de-rated according to the attached chart.

Example: DON-x25 measuring oil at 8000 cP, max. flow 150 l/min x 0.5 = 75 l/min new maximum flow rate.

Output Pulse Resolution

Model	Measuring range [l/min]	Pulse/litre					
		Reed switch Rx	Hall sensor Hx	Hall sensor Bx	Quadr. hall sensor Dx	Hall sensor, high-resolution Gx	Hall sensor, high-resolution Kx
DON-x05	0.5 - 36 l/h	2670	2670	-	2670	11320	5340
DON-x06	2 - 36 l/h	2670	2670	-	-	-	-
DON-x10	2 - 100 l/h	1062	1062	-	1062	4248	2124
DON-x15	15 - 550 l/h	351	702	351	702	-	1404
DON-x20	1 - 40	82	163	82	163	-	320
DON-x25	10 - 150	26	104	52	52	-	-
DON-x30	15 - 250	14	55	27	27	-	-
DON-x35	30 - 450	6.4	25.5	13.5	13.5	-	-
DON-x40	50 - 580	4.9	19.6	9.8	9.8	-	-
DON-x45	35 - 750	2.57	10.3	5.15	5.15	-	-
DON-x50	50 - 1000	1.5	5.9	3	3	-	-
DON-x55	75 - 1500	1.05	4.2	2.1	2.1	-	-
DON-x60	150 - 2500	0.56	2.3	1.15	1.15	-	-

The values in above mentioned table are only approximate guidelines. The actual value for pulse rate can deviate from the values in this table and is mentioned in calibration certificate delivered with the flowmeter.
