## Manufactured and sold by:

Kobold Messring GmbH Nordring 22-24 D-65719 Hofheim Tel.: +49(0)6192-2990

Fax: +49(0)6192-23398 E-Mail: info.de@kobold.com Internet: www.kobold.com

page 2 DAG-M1F K06/0623

## 2. Note

Please read these operating instructions before unpacking and putting the unit into operation. Follow the instructions precisely as described herein.

The instruction manuals on our website <a href="www.kobold.com">www.kobold.com</a> are always for currently manufactured version of our products. Due to technical changes, the instruction manuals available online may not always correspond to the product version you have purchased. If you need an instruction manual that corresponds to the purchased product version, you can request it from us free of charge by email (<a href="mailto:info.de@kobold.com">info.de@kobold.com</a>) in PDF format, specifying the relevant invoice number and serial number. If you wish, the operating instructions can also be sent to you by post in paper form against an applicable postage fee.

Operating instructions, data sheet, approvals and further information via the QR code on the device or via <a href="https://www.kobold.com">www.kobold.com</a>

The devices are only to be used, maintained and serviced by persons familiar with these operating instructions and in accordance with local regulations applying to Health & Safety and prevention of accidents.

When used in machines, the measuring unit should be used only when the machines fulfil the EC machinery directive.

## 3. Instrument Inspection

Instruments are inspected before shipping and sent out in perfect condition. Should damage to a device be visible, we recommend a thorough inspection of the delivery packaging. In case of damage, please inform your parcel service / forwarding agent immediately, since they are responsible for damages during transit.

#### Scope of delivery:

The standard delivery includes:

Digital Indicator and Controller for Panel Mounting model: DAG-M1F

## 4. Regulation Use

Any use of the device, which exceeds the manufacturer's specification, may invalidate its warranty. Therefore, any resulting damage is not the responsibility of the manufacturer. The user assumes all risk for such usage.

## 5. Brief description

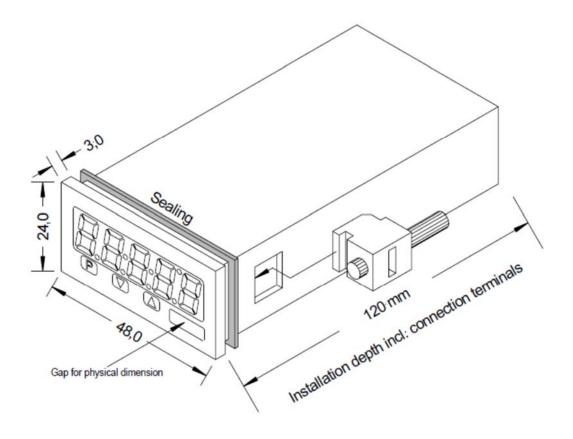

The panel meter DAG-M1F can evaluate pulses in many different ways and show the result in the 5-digit LED-display. Available options are: frequency coverage with optional filters, summate of pulses or display values via the time, detection of a rotational speed or collection of a position via an incremental encoder. The results can be monitored via alarm conditions and can be displayed onto the optional switching point. Furthermore, the results can be freely scaled on an optional analog output and relayed to a control system. The device can be operated directly by Namur sensors, 3 wire sensors, switching/ slider contacts, incremental encoders (HTL-/TTL-output) or TTL-signals. Via the 3 navigation keys on the front, the device can be adjusted onto different kind of applications and later on different functions of the device can be controlled. With an individual code, the created parameterization can be protected against changes of the user.

Numerous applications can be realized with this device, like e.g. tachometer, revolution counter, flowmeter, dosing equipment, filling capacity meter, baking time meter of a baking oven, flying knife, position evaluation, position surveillance, flow rate surveillance, acoustic discharge measurements and so on. By use of the integrated, configurable functions like permanent min/max-recording, averaging, frequency filter, setpoint setting, threshold value recording via alarm system, 30-points-linearisation, mathematic charging and many more, you receive a universal applicable modern system for your demands in measuring and control technique.

page 4 DAG-M1F K06/0623

## 6. Assembly

Please read the Safety advice on page 37 before installation and keep this user manual for future reference.

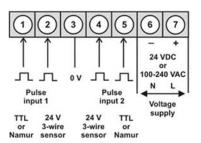

- 1. After removing the fixing elements, insert the device.
- 2. Check the seal to make sure it fits securely.
- 3. Click the fixing elements back into place and tighten the clamping screws by hand. Then use a screwdriver to tighten them another half a turn.

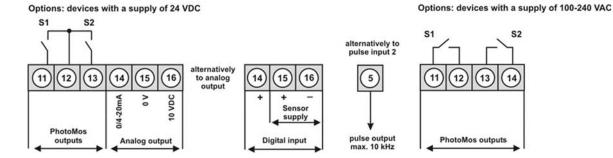

## CAUTION! The torque should not exceed 0.1 Nm!

The dimension symbols can be exchanged before installation via a channel on the side!

## 7. Electrical connection

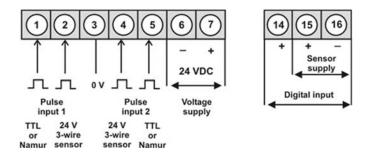

Type DAG-M1F8 – supply 100-240 VAC DC ± 10% Type DAG-M1F3 – supply 24 VDC galvanic isolated

## Type DAG-M1F30W0R

Frequency 0.01Hz to 9.9999 kHz with speed transmitter / 0 to 2.5000 kHz at position survey

#### Attention!

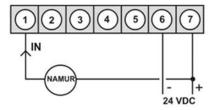

For Namur sensors with a nominal voltage of approx. 8 V, a sensor supply of 12 VDC is needed!

## 8. Function and operation description

#### Operation

The operation is divided into three different levels.

#### Menu level (delivery status)

This level is for the standard settings of the device. Only menu items which are sufficient to set the device into operation are displayed. To get into the professional level, run through the menu level and parameterise **prof** under menu item **RUN**.

#### Menu group level (complete function volume)

Suited for complex applications as e.g. linkage of alarms, setpoint treatment, totaliser function etc. In this level function groups which allow an extended parameterisation of the standard settings are available. To leave the menu group level, run through this level and parameterise **uloc** under menu item **RUN**.

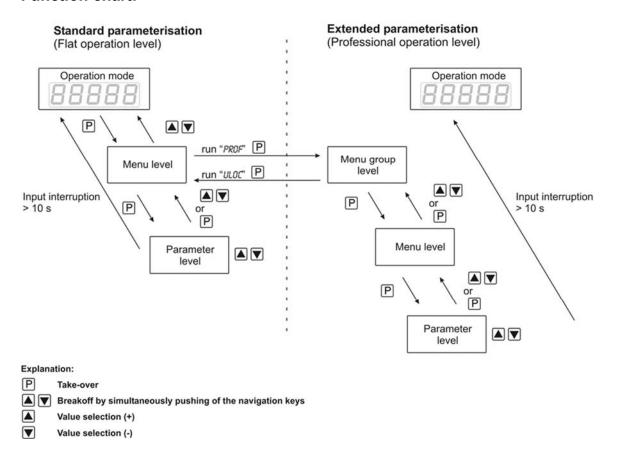

#### Parameterisation level

Parameter deposited in the menu item can here be parameterised. Functions, that can be changed or adjusted, are always signalised by a flashing of the display. Settings that are made in the parameterisation level are confirmed with **[P]** and thus saved. Pressing the navigation keys leads to a break-off the value input and to a change into the menu level. All adjustments are saved automatically by the device and changes into operating mode, if no further key operation is done within the next 10 seconds.

| Level                  | Key | Description   |
|------------------------|-----|---|
|                        | Р   | Change to parameterisation level and deposited values.                        |
| Menu level             |     | Keys for up and down navigation in the menu level.                            |
|                        |     | Change into operation mode by pressing both navigation keys at the same time. |
|                        | Р   | To confirm the changes made at the parameterization level.                    |
| Parameterisation level |     | Adjustment of the value / the setting.  |
|                        |     | Change into operation mode by pressing both navigation keys at the same time. |
|                        | Р   | Change to menu level.   |
| Menu group level       |     | Keys for up and down navigation in the menu group level.                      |
|                        |     | Change into operation mode by pressing both navigation keys at the same time. |

page 8 DAG-M1F K06/0623

## **Function chart:**

## 9. Setting up the device

## 9.1 Switching-on

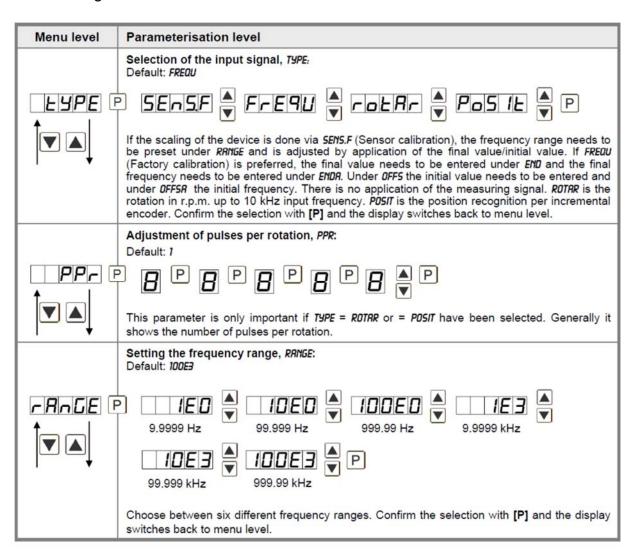

Once the installation is complete, start the device by applying the voltage supply. Before, check once again that all electrical connections are correct.

#### Starting sequence

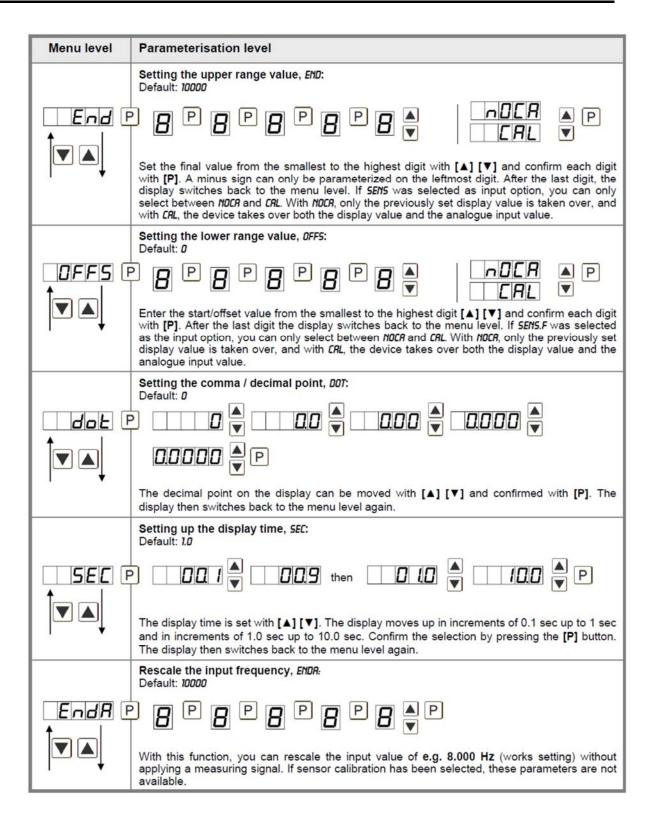

For 1 second during the switching-on progress, the segment test (8 8 8 8) is displayed, followed by an indication of the software type and, after that, also for 1 second, the software version. After the starting sequence, the device switches to operation / display mode.

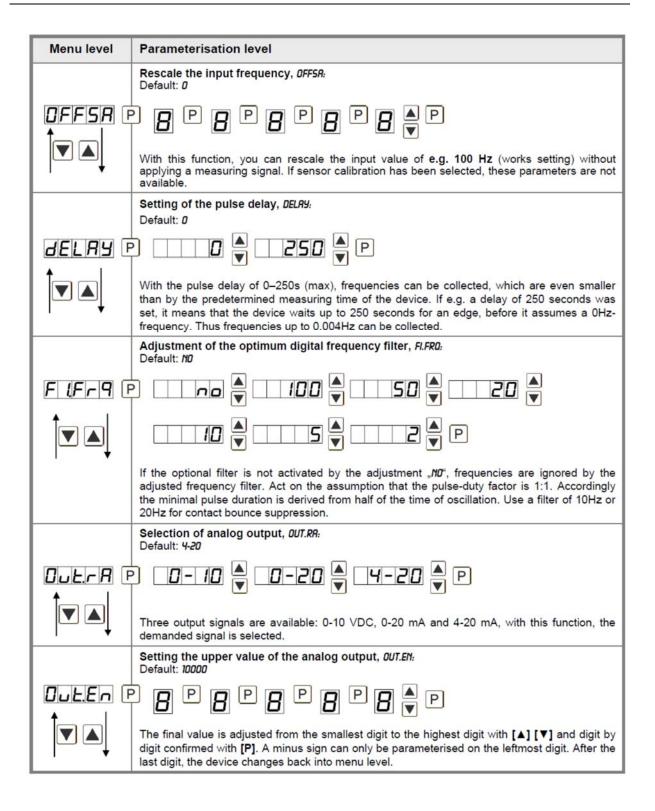

#### 9.2 Standard parameterization (flat operation level)

To parameterize, press the **[P]** key in operating mode for 1 second. The display then changes to the menu level with the first menu item **TYPE**.

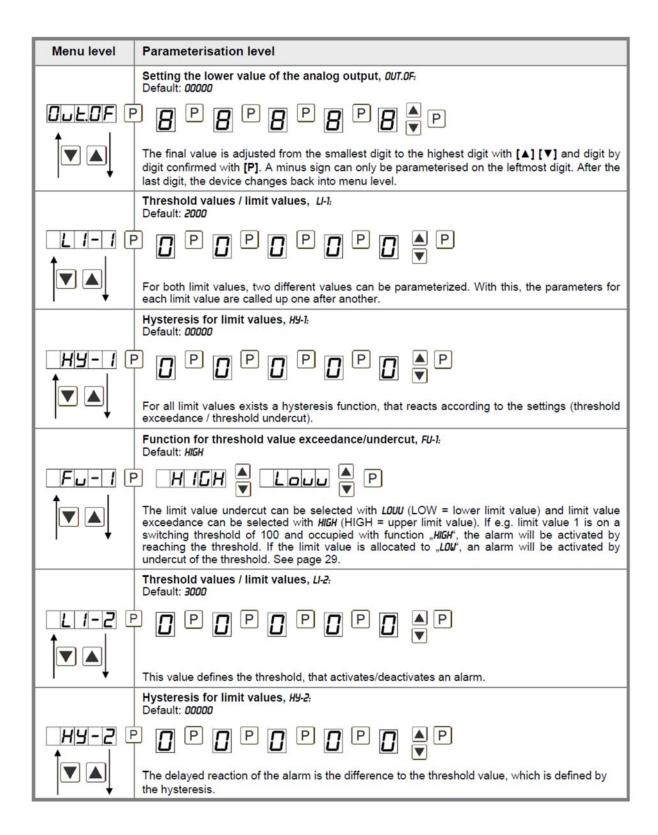

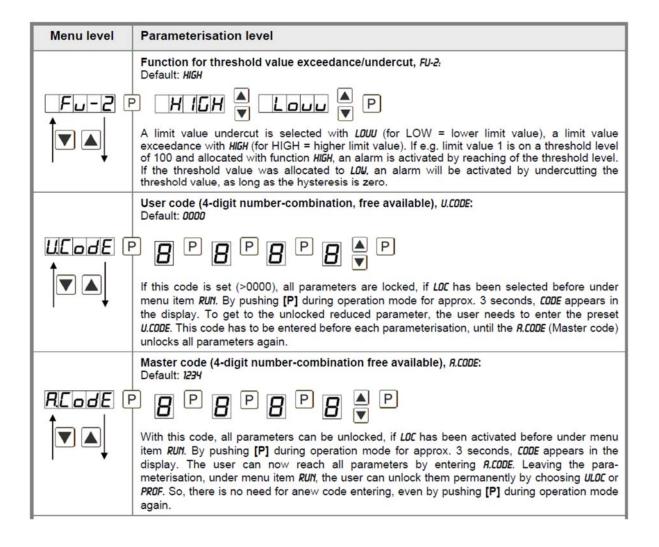

page 10 DAG-M1F K06/0623

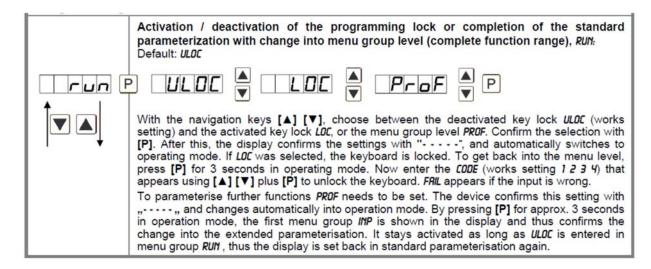

page 12 DAG-M1F K06/0623

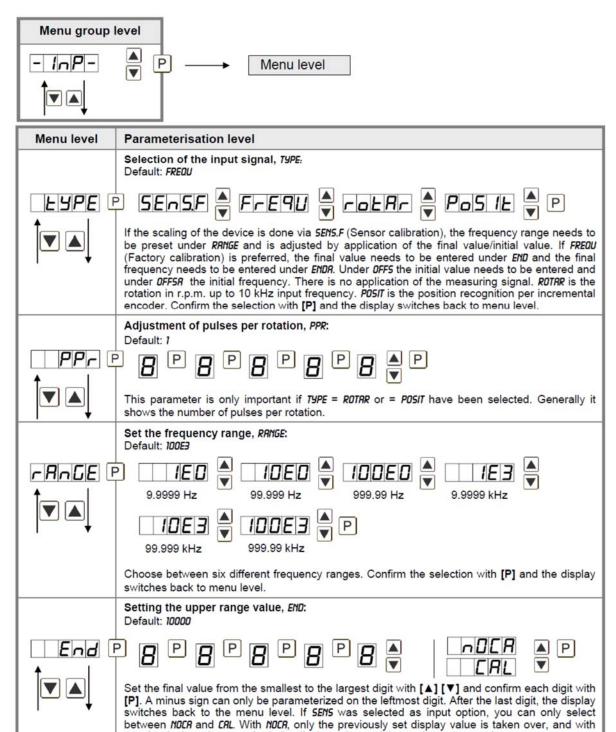

page 14 DAG-M1F K06/0623

## 9.3 Programming interlock "run"

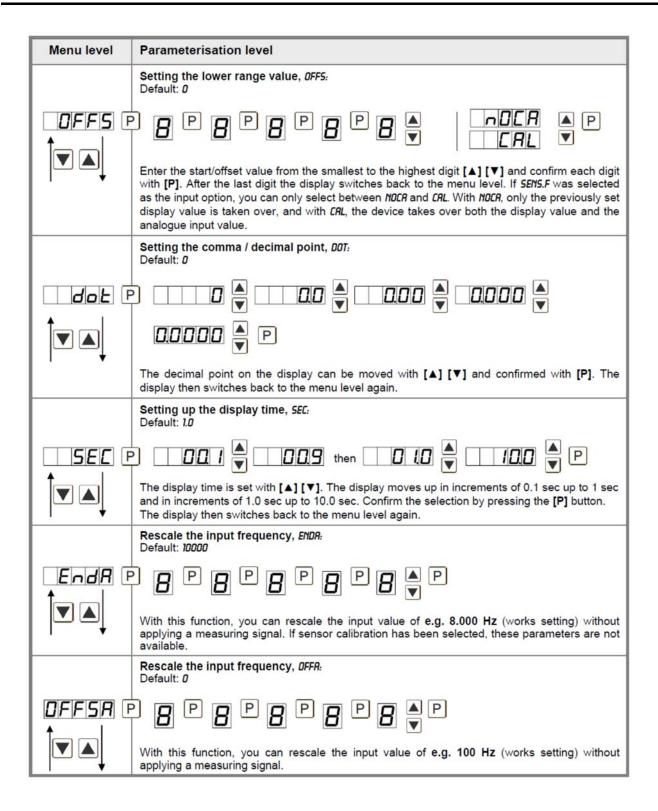

## 9.4 **Extended parameterization** (Professional operation level)

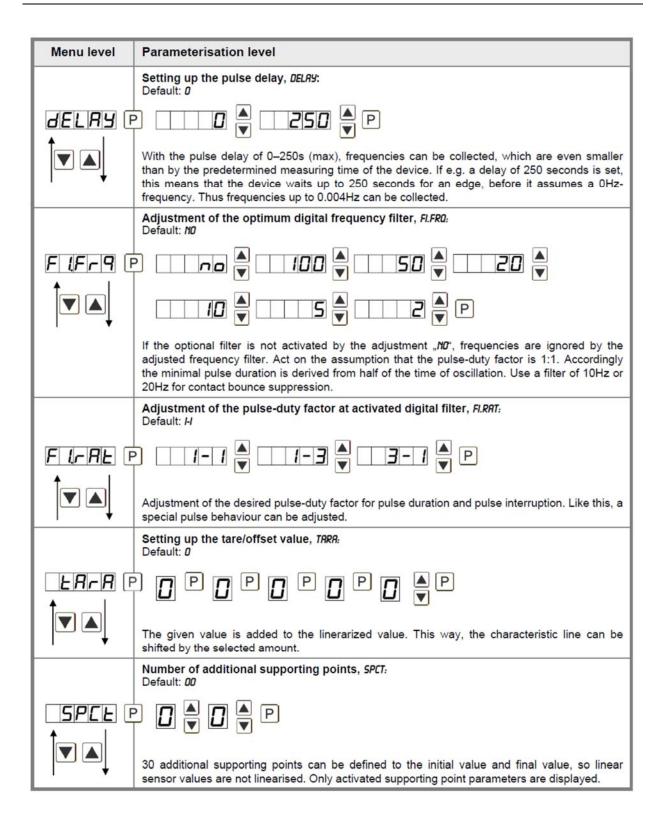

## 9.4.1 Signal input parameters

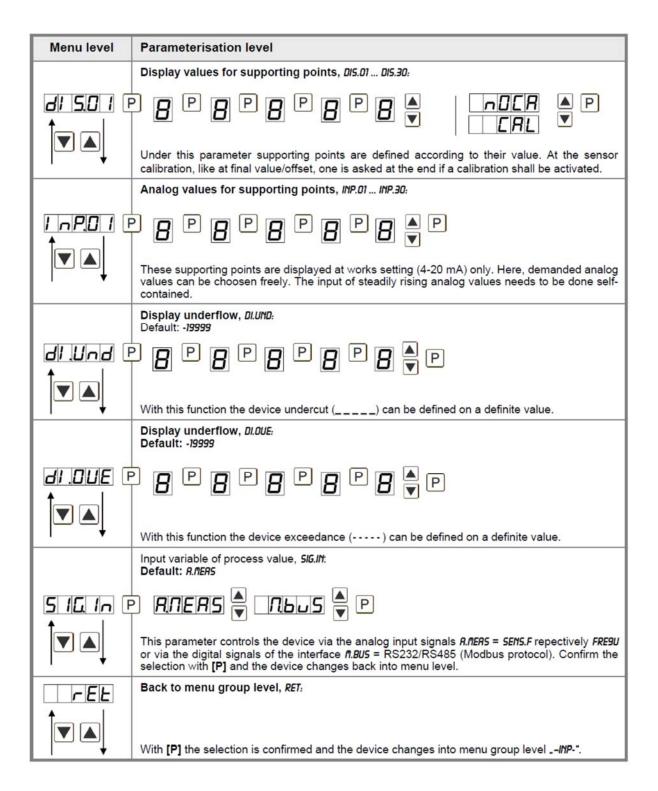

page 16 DAG-M1F K06/0623

CRL, the device takes over both the display value and the analogue input value.

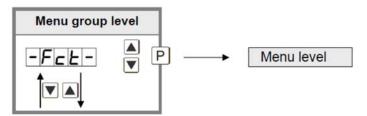

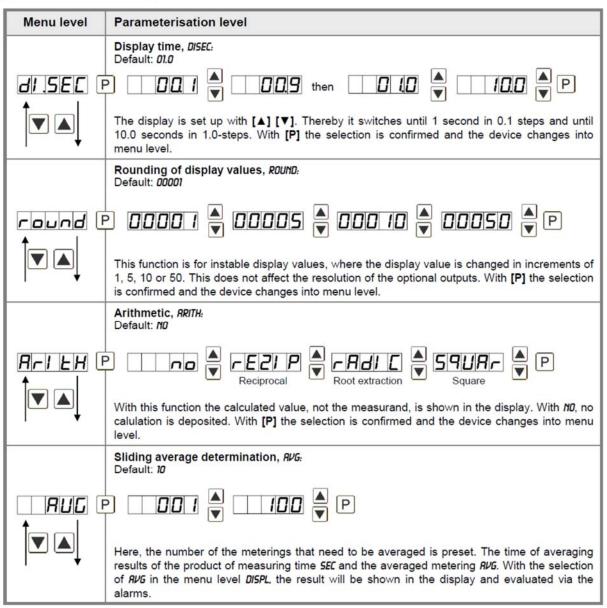

page 18 DAG-M1F K06/0623

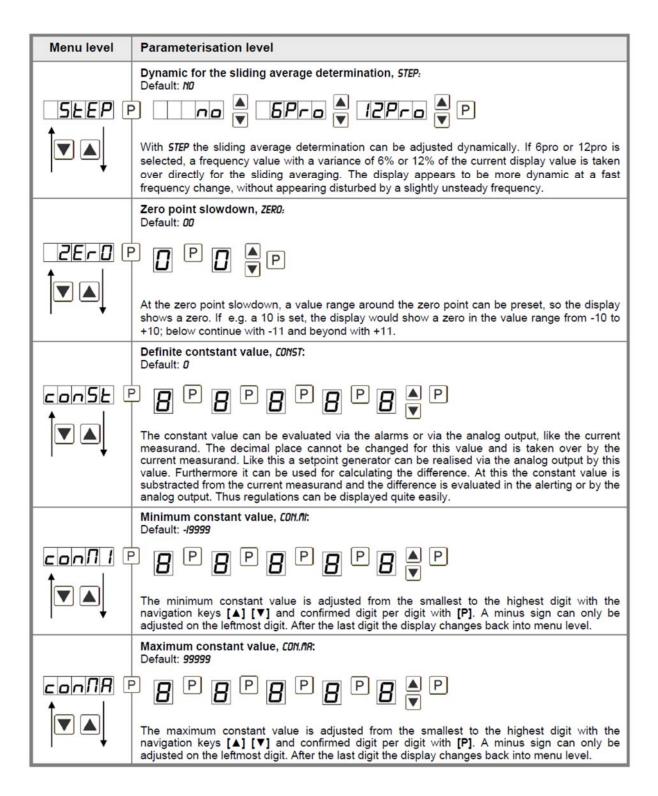

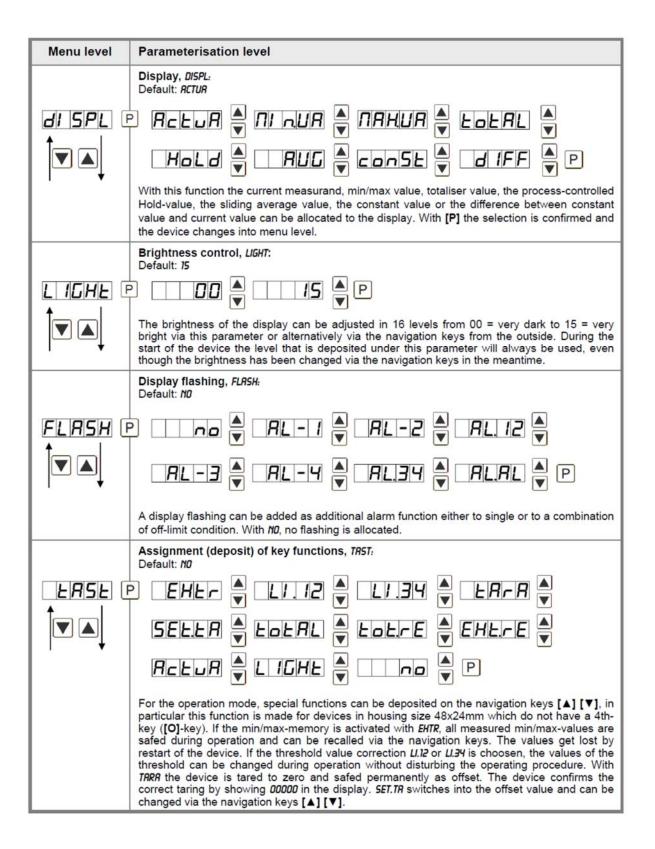

## 9.4.2 General device parameters

page 20 DAG-M1F K06/0623

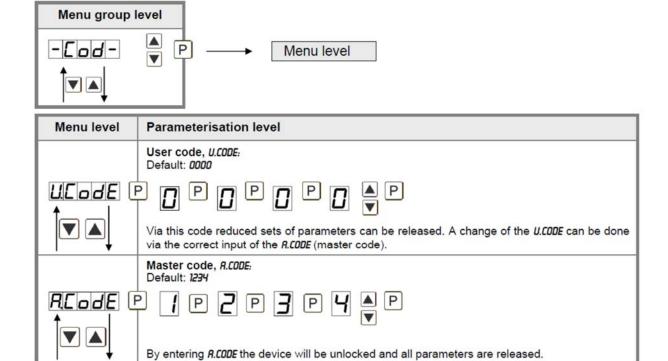

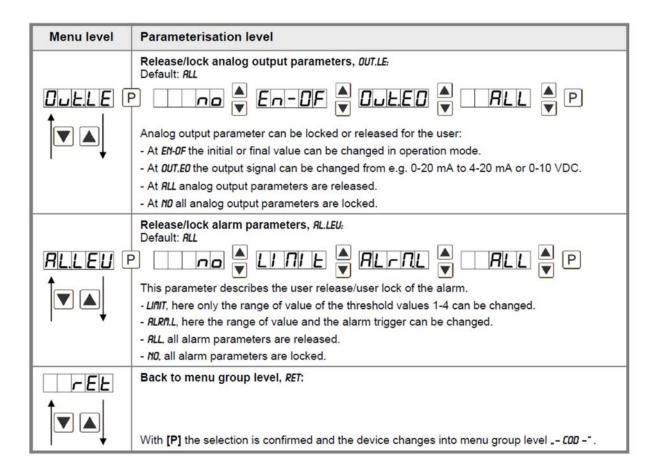

page 22 DAG-M1F K06/0623

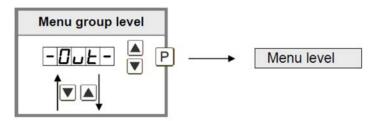

| Menu level   | Parameterisation level  |
|--------------|---|
| Continuation | Via TOTRL the current value of the totaliser can be displayed, after this the device changes back onto the parameterised display value. If TOT.RE is deposited, the totaliser can be set back by pressing the navigation keys [▲] [▼], the device acknowledges this with DODDO in the display. The configuration of EHT.RE deletes the min/max-memory. Under RCTUR the measurand is shown, after this the display returns to the parameterised display value. The brightness can be adjusted with LIGHT. This adjustment is not safed and lost at a restart of the device. If NO is selected, the navigation keys are without any function in the operation mode. |
|              | Special function digital input, DIG.IN: Default: NO   |
|              | EHELE & REFOR & HOLD & LOFE   |
|              |   |
|              | In operation mode, the above shown parameter can be laid on the optional digital input, too. Function description see <i>TRST</i> .   |
| LEE          | Back to menu group level, RET:  |
|              | With [P] the selection is confirmed and the device changes into menu group level FCT -".  |

## 9.4.3 Safety parameters

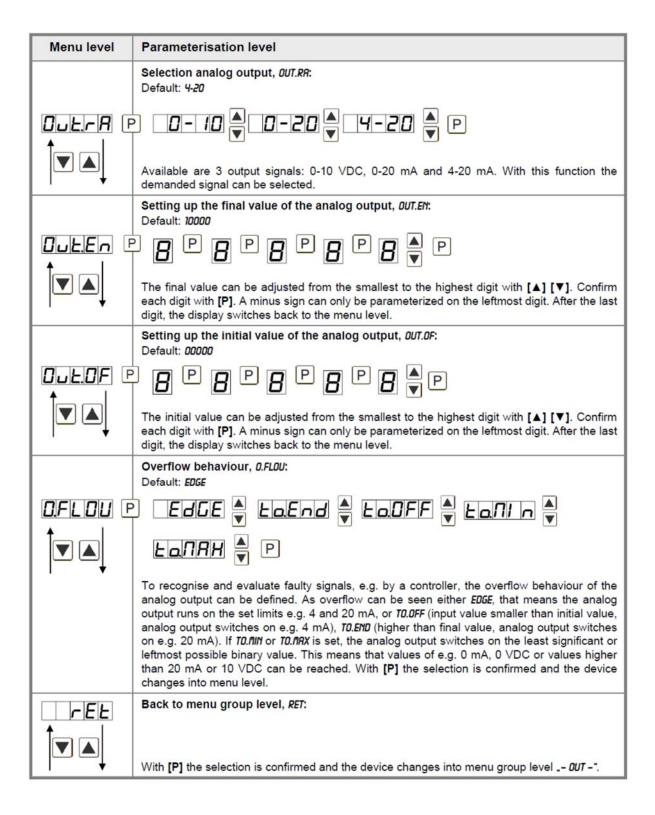

## 9.4.4 Analog output parameters for analogue output

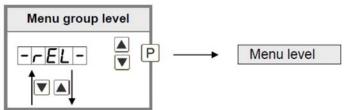

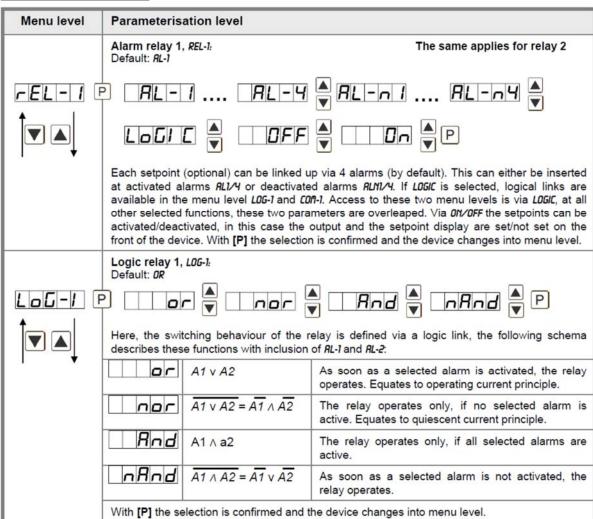

| Menu level | Parameterisation level   |
|------------|--|
|            | Selection reference of analog output, OUTPT: Default: RCTUR  |
|            | P RCEUR TO THUR TO   |
|            | The analog output signal can refer to different functions, in detail this are the current measurand, min-value or max-value. If HOLD is selected the signal of the analog output will be hold and processed just after deactivation of HOLD. With [P] the selection is confirmed and the device changes into menu level. |

page 24 DAG-M1F K06/0623

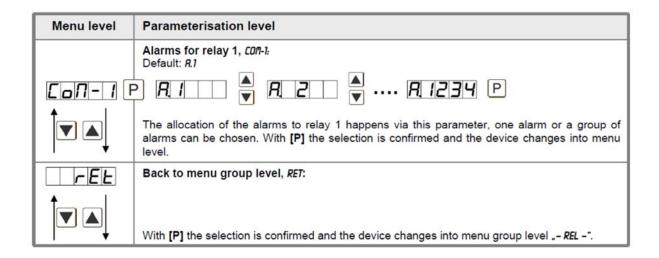

## 9.4.5 Relay functions

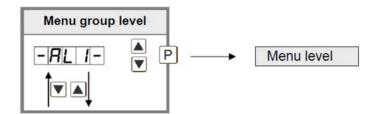

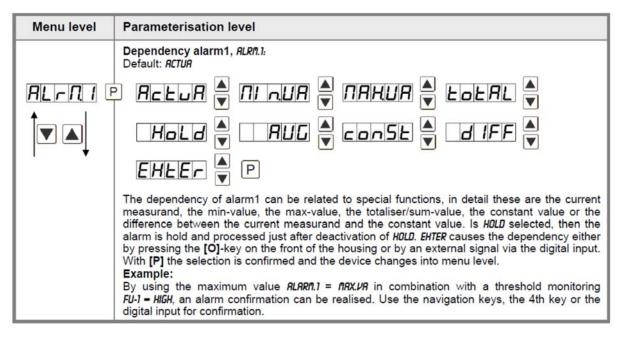

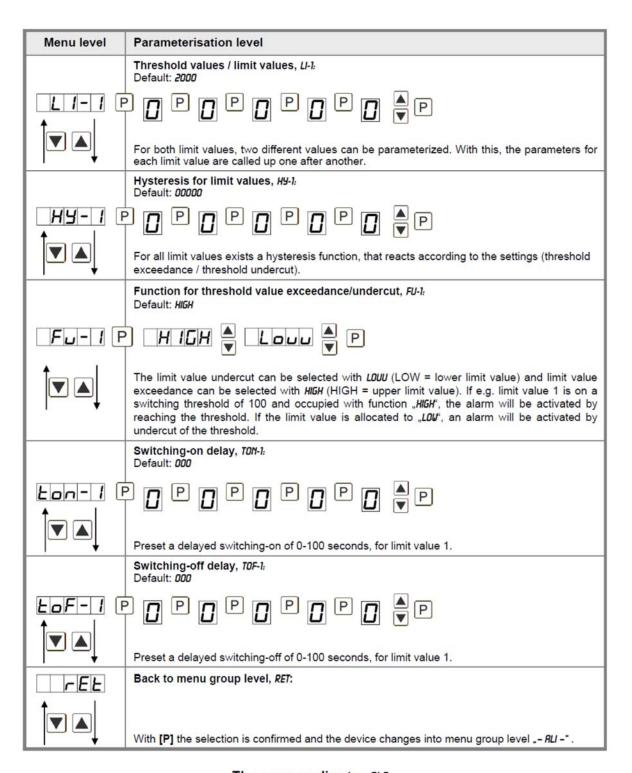

page 26 DAG-M1F K06/0623

## 9.4.6 Alarm parameters

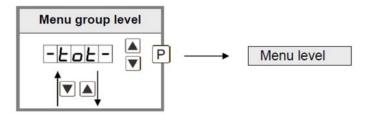

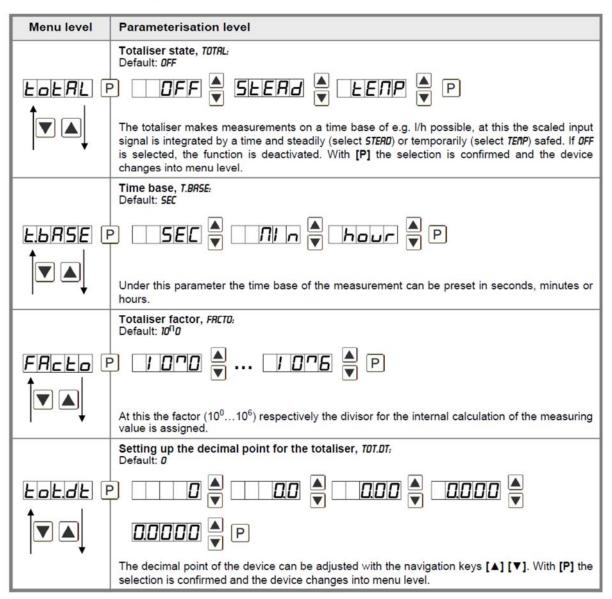

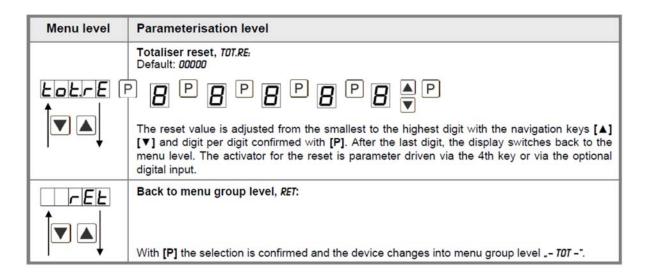

The same applies to -RL2-.

page 28 DAG-M1F K06/0623

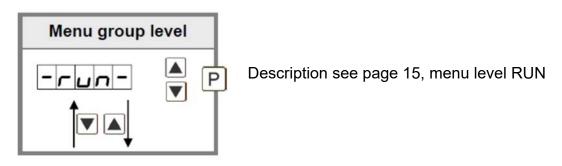

## 9.4.7 Totalizer (Volume measurement)

## Programming lock, run:

## 10. Reset to factory settings

To return the unit to a **defined basic state**, a reset can be carried out to the default values. The following procedure should be used:

- Switch off the power supply
- Press button [P]
- Switch on voltage supply and press [P] button until "- - - " is shown in the display.

With reset, the default values of the program table are loaded and used for subsequent operation. This sets the unit back to the state in which it was supplied.

## Caution! All application-related data are lost.

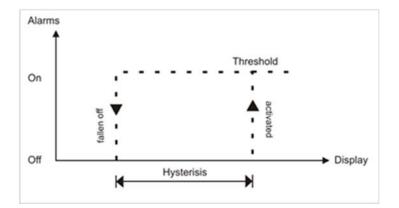

page 30 DAG-M1F K06/0623

## 11. Alarms / Relays

This device has 4 virtual alarms that can monitor one limit value in regard of an undercut exceedance. Each alarm can be allocated to an optional relay output S1-S4. Furthermore, alarms can be controlled by events like e.g. hold or min/max value.

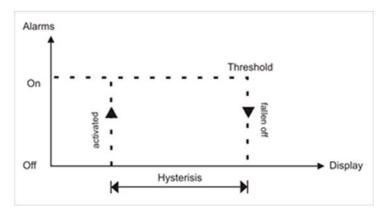

| Function principle of alarms / relays |  |  |
|---------------------------------------|--|--|
| Alarm / Relay x                       | Deactivated, instantaneous value, min/max-value, hold-value, totaliser value, sliding average value, constant value, difference between instantaneous value and constant value or an activation via the digital input or via the navigation keys [A][V]. |  |
| Switching threshold                   | Threshold / limit value of the change-over   |  |
| Hysteresis                            | Broadness of the window between the switching thresholds   |  |
| Working principle                     | Operating current / Quiescent current  |  |

## DAG-M1F

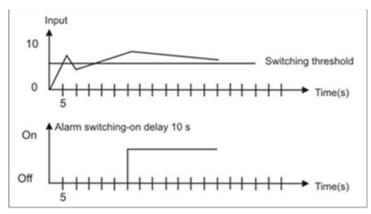

## **Operating current**

By operating current the alarm S1-S2 is "off" below the threshold and "on" on reaching the threshold.

#### **Quiescent current**

By quiescent current the alarm S1-S2 is "on" below the threshold and switched "off" on reaching the threshold.

#### Switching-on delay

switching-on delay The activated via an alarm and e.g. 10 switched seconds reaching the switching threshold, a short-term exceedance of the switching value does not cause an alarm, respectively does not cause a switching operation of the relay. The switching-off delay operates in the same way, keeps the alarm / the relay switched longer for the parameterized time.

page 32 DAG-M1F K06/0623

## 12. Programmer examples

## **Example for the rotation speed adjustment**

In this application the rotation speed of an axis shall be collected via a toothed wheel with 30 sprockets, per Namur sensor. It is then displayed with one position after decimal point and the dimension rpm.

| Parameter | Settings | Description                                       |
|-----------|----------|---|
| LYPE      | roLRr    | Rotation – rotation speed measurment up to 10 kHz |
| PPr       | 30       | Number of sprockets                               |
| dot       |          | 1 position after decimal point                    |

Advice: The input frequency may be maximum 9.999 kHz in this operating module. So, a rotation speed parameterization via the frequency adjustment is rarely necessary.

#### Example for the position coverage

A measuring system for length works via incremental encoder with two dephased output signals (typically A and B) and 100 pulse/rotation. The axis perimeter was calculated in a way that the measuring section can be extracted by a rotation of 6 cm = 60 mm. The display shall show the relative position in millimeter. There is a zero-point position with a limit switch, that can zero the display if required.

| Parameter | Settings | Description                   |
|-----------|----------|-------------------------------|
| LYPE      | Po5 1E   | Positioning – rotary encoder  |
| PPr       |          | Pulse number per rotation     |
| End       | 60       | Change of length per rotation |
| d 16. In  | LACA     | Display zero                  |

Advice: The display starts always on position zero. The parameter **dig.in** can be found under parameter group **-fct-** in the extended parameterization **Prof**.

#### **Example for angle coverage**

On a manually operated bender for sheet metal the bending angle shall be displayed in degree. The device is in zero state (0°) during switching on of the display. An incremental encoder with 360 pulses/rotation is used.

| Parameter | Settings | Description                  |
|-----------|----------|------------------------------|
| LYPE      | Po5 1E   | Positioning – rotary encoder |
| PPr       | 360      | Pulse number per rotation    |
| End       | 360      | Angle sum per rotation       |

# Examples: Adjustment according to number of sprockets at unknown rotation speed

- Nearly 100% of the rotation speed are in the range of 0 to 30.000 r.p.m.
- The number of sprockets varies (without gearing) between 1 and 100
- In automation, the frequency supply never exceeds 10 kHz (rather 3 kHz)

# Assume a rotation speed of 60 r.p.m. at 1 Hz, whereat the real frequency value will not be considered.

Our example complies with a number of sprockets of 64.

## Setting up the device

Based on the default settings of the display, the following parameters need to be changed:

| Parameter | Settings | Description   |
|-----------|----------|---|
| LYPE      | FLEGU    | Applying of the measuring signal is not applicable. |
| - ROGE    | IE3      | Complies with 9.9999 Hz                             |
| End       | <u> </u> | Assumed final value                                 |
| EndR      | 0.0064   | Complies with 64 sprockets                          |

If the frequency needs to be displayed with a position after decimal point, then a 60 has to be selected as final value for this adjustment.

| Parameter | Settings                               | Description   |
|-----------|--|---|
| LYPE      | FLEAN                                  | Applying of the measuring signal is not applicable. |
| - ROGE    | IIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII | Complies with 9.9999 Hz                             |
| End       | 60                                     | Assumed final value                                 |
| dob       |  | 1 position after decimal point                      |
| EndR      | 0.0064                                 | Complies with 64 sprockets                          |

page 34 DAG-M1F K06/0623

## **Example: Rotation speed of a machine shaft**

There are 4 sprockets on one machine shaft. Applied in an angle of 90° to each other and to the rotation speed measurement. The sprockets are collected via a proximity switch and evaluated by the frequency drive, which shall display the rotation speed in U/min. 0...3600 U/min is preset as rotation speed range of the machine.

## Calculation of the input frequency

Number of sprockets = 4

Rotation speed = 3600 U/min

Final rotation speed 
$$[\frac{U}{min}]$$
Final frequency [Hz] =  $\frac{S}{min} \times Number of sprockets$ 

Final frequency [Hz] = 
$$\frac{3600 \frac{U}{min}}{60 \frac{s}{min}} \times 4 = 240 \text{ Hz}$$

## Setting up the device

Based on the default settings of the device, following parameters need to be changed:

| Parameter | Settings | Description   |
|-----------|----------|---|
| LYPE      | FrEqu    | As the input frequency is known, the device does not need to be applied to the measuring section. |
| rRnGE     | 100E0    | The final frequency is in the range of 100.00 to 999.99 Hz.                                       |
| End       | 3600     | A rotation speed of 3600 shall be displayed as final value.                                       |
| EndR      | 24000    | The final frequency for display value 3600 is 24.00 Hz.   |

page 36 DAG-M1F K06/0623

## 16. Safety advices

Please read the following safety advices and the assembly *chapter 6* before installation and keep it for future reference.

## Proper use

The **DAG-device** is designed for the evaluation and display of sensor signals.

DANGER! Careless use or improper operation can result in personal injury and/or cause damage to the equipment.

#### Control of the device

The panel meters are checked before dispatch and sent out in perfect condition. Should there be any visible damage, we recommend close examination of the packaging. Please inform the supplier immediately of any damage.

#### Installation

The **DAG-device** must be installed by a suitably **qualified specialist** (e.g. with a qualification in industrial electronics).

#### Notes on installation

- There must be no magnetic or electric fields in the vicinity of the device, e.g. due to transformers, mobile phones or electrostatic discharge.
- The fuse rating of the supply voltage should not exceed a value of **0.5 A N.B. fuse**.
- Do not install **inductive consumers** (relays, solenoid valves etc.) near the device and **suppress** any interference with the aid of RC spark extinguishing combinations or free-wheeling diodes.
- Keep input, output and supply lines separate from one another and do not lay them
  parallel with each other. Position "go" and "return lines" next to one another. Where
  possible use twistedpair. So, you receive best measuring results.
- Screen off and twist sensor lines. Do not lay current-carrying lines in the vicinity. Connect the screening on one side on a suitable potential equalizer (normally signal ground).
- The device is not suitable for installation in areas where there is a risk of explosion.
- Any electrical connection deviating from the connection diagram can endanger human life and/or can destroy the equipment.
- The terminal area of the devices is part of the service. Here electrostatic discharge needs to be avoided. Attention! High voltages can cause dangerous body currents.

## DAG-M1F

 Galvanic isolated potentials within one complex need to be placed on an appropriate point (normally earth or machines ground). So, a lower disturbance sensibility against impacted energy can be reached and dangerous potentials, that can occur on long lines or due to faulty wiring, can be avoided.

page 38 DAG-M1F K06/0623

# 17. Error elimination

|    | Error description   | Measures   |
|----|---|--|
| 1. | The device shows a permanent overflow   | <ul> <li>The input frequency is too high for the selected frequency range. Correct "RRINGE" according to this.</li> <li>Disturbing pulses lead to an increased input frequency, activate "FI.FRTI" at smaller frequencies or shield the senor line.</li> <li>A mechanic switching contact chatters. Activate the frequency filter "FI.FRTI" with 10 or 20 kHz.</li> <li>The display was taught faulty under "TYPE" = "SENS.F". Error elimination see below.</li> </ul>   |
| 2. | The device shows a permanent underflow.                                       | <ul> <li>An offset frequency "DFFSA" bigger than 0 Hz respectively a "Living Zero" was selected, in which no frequency is aligned. Check the sensor lines or set the "DFFSA" onto 0 Hz.</li> <li>The display underflow DL.UND was selected too high. The according parameter needs to be adapted.</li> <li>The device was taught faulty under "TYPE" = "SENS.F". Error elimination see below.</li> </ul>   |
| 3. | The displayed values switches sporadical.                                     | <ul> <li>Disturbances lead to short-term display switches. For smaller frequences use the frequency filter "FI.FRO", select a higher measuring time or use the sliding averaging.</li> <li>The sprockets that needs to be collected, are not evenly spread on a shaft or are not Use the sliding averaging "RVG" if necessary with the dynamic function "STEP". The displayed value "DISPL" needs to be set on "RVG".</li> </ul>   |
| 4. | The display remains on zero.  | <ul> <li>The sensor was not connected properly. Check the connection lines and if necessary the sensor supply. Best directly on the screw terminals of the devicel</li> <li>A PNP- respectively NPN-output does not reach the required threshold. Check the voltage between terminal 2 and 3 with a Multimeter. Depending on signal form it generally shoud be between 4 V and 15 V. The thresholds can be checked more safely with an oscilloscope. If necessary include an external Pull-up or Pull-down.</li> <li>A Namur-sensor does not react. Check the distance between the sensor and the sprocket / survey mark and if necessary measure the voltage between 1 &amp; 3. In open condition the input voltage needs to be smaller than 2.2 V and in active condition bigger than 4.6 V.</li> <li>The selected range of the input frequency is too high. Reduce the frequency range "RRNGE" to a smaller value.</li> <li>The activated frequency filter "FI.FRU" suppresses the relevant pulses. Increase the filter frequency "FI.FRU" or use the adaption of the key proportion "FI.RRT". If this should not work, temporarily deactivate the frequency filter with "FI.FRU" = "NU".</li> <li>The device was taught faulty under "TYPE" = "SENS.F". Change into "TYPE" "FREDU" and preset the assumed frequency range "RRNGE" and the according initial and final values "ENID", "OFFFS", "ENDR", and "DFFSR". So you can check if a frequency signal was connected to the input.</li> </ul> |
| 5. | The device shows " <i>HELP</i> " in the 7-segment display                     | The device located an error in the configuration memory, excecute a reset to<br>the default values and set up the device according to your application.  |
| 6. | Program numbers for the<br>parameterisation of the<br>input are not available | The programming interlock is activated.  Enter correct code.   |
| 7. | The device shows " <i>ERRI</i> " in the 7-segment display                     | Contact the manufacturer if errors of this kind occur.   |
| 8. | The device does not react as expected.  | If you are not sure, that the device has been parameterised before, restore the state of delivery as described in <i>chapter 6</i> .   |

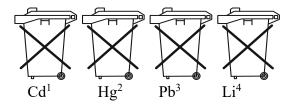

## 18. Disposal

#### Note!

- Avoid environmental damage caused by media-contaminated parts
- Dispose of the device and packaging in an environmentally friendly manner
- Comply with applicable national and international disposal regulations and environmental regulations.

## **Batteries**

Batteries containing pollutants are marked with a sign consisting of a crossed-out garbage can and the chemical symbol (Cd, Hg, Li or Pb) of the heavy metal that is decisive for the classification as containing pollutants:

- 1. "Cd" stands for cadmium
- 2. "Hg" stands for mercury
- 3. "Pb" stands for lead
- 4. "Li" stands for lithium

## **Electrical and electronic equipment**

## 19. EU Declaration of Conformance

We, KOBOLD Messring GmbH, Hofheim-Ts, Germany, declare under our sole responsibility that the product:

Digital Indicating Unit model: DAG-M1F

to which this declaration relates is in conformity with the standards noted below:

**EN 61010-1:2010 + A1:2019 + A1:2019/AC:2019** Safety requirements for electrical equipment for measurement, control and laboratory use - Part 1: General requirements

**EN 61326-1:2013** Electrical equipment for measurement, control and laboratory use - EMC requirements - Part 1: General requirements

**EN IEC 63000:2018** Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances

Also, the following EC guidelines are fulfilled:

2014/30/EU EMC Directive

2014/35/EU Low Voltage Directive 2011/65/EU RoHS (category 9)

**2015/863/EU** Delegated Directive (RoHS III)

## 20. UK Declaration of Conformity

We, KOBOLD Messring GmbH, Hofheim-Ts, Germany, declare under our sole responsibility that the product:

Digital Indicating Unit Model: DAG-M1F

to which this declaration relates is in conformity with the standards noted below:

#### BS EN 61010-1:2010+A1:2019

Safety requirements for electrical equipment for measurement, control, and laboratory use. General requirements

#### BS EN 61326-1:2013

Electrical equipment for measurement, control and laboratory use. EMC requirements. General requirements

#### **BS EN IEC 63000:2018**

Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances.

Also, the following UK guidelines are fulfilled:

| Electromagnetic Compatibility Regulations 2016             |
|--|
| Electrical Equipment (Safety) Regulations 2016             |
| The Restriction of the Use of Certain Hazardous Substances |
| in Electrical and Electronic Equipment Regulations 2012    |
|  |
