Description

The screw-in resistance thermometers comprise a rugged sensor made of stainless steel with fixed or sliding thread. Depending on the version, the connecting leads are suitable for dry or moist rooms. The junction between connecting lead and protective tube is strain relieved and is fitted with bend protection.

Protective tube and process connection are made of stainless steel. Other materials are available on request.

Pt100 temperature sensors according to IEC 751, class A or class B are used as standard. Other classes or versions are also available with Pt500 and Pt1000. These sensors

Screw-in Resistance Thermometers

with cable

are available as single or double resistance thermometers. The screw-in resistance thermometers are available in two-, three- or four-wire circuitry.

Applications

Screw-in resistance thermometers are particularly suited for measuring temperature in liquid and gaseous media.

Areas of application are to be found in heating installation, furnace and apparatus construction, machine construction and building installations as well as in industry in general.
